Professional Summary

Aspiring to become DevOps Engineer with hands-on experience in AWS Cloud, Docker, Kubernetes, Terraform, Jenkins, GitHub Actions, Linux, Python, and CI/CD automation through real-world cloud projects. Skilled in Infrastructure as Code (IaC), container orchestration, cloud deployment, monitoring, and automation. Passionate about building scalable, secure, and highly available cloud infrastructure while continuously learning DevOps best practices.

Education

Bachelor of Engineering – Artificial Intelligence And Machine Learning

Global Academy of Technology, Bangalore

CGPA: 8.07

Tools and Technical Skills

Cloud Platforms: AWS (EC2, IAM, S3, VPC, ALB, ECS, EKS, CloudWatch, ECR)

Containers: Docker, Kubernetes

CI/CD: Jenkins, GitHub Actions

Version Control: Git, GitHub

Scripting: Bash, Python

OS: Linux (Ubuntu, CentOS)

Monitoring: Prometheus, Grafana, CloudWatch

Networking: TCP/IP, HTTP/HTTPS, DNS, Load Balancer

Projects

AWS Bedrock-Based End-to-End Generative AI Application

- Built a serverless Generative AI application using Amazon Bedrock, AWS Lambda, Amazon S3, and API Gateway.
- Developed REST APIs to securely invoke foundation models and process user requests.
- Validated end-to-end workflows using Postman to ensure successful API integration and functionality.

Zomoto-Devops-Proejct

- Built an end-to-end CI/CD pipeline using Jenkins to automate GitHub source-code checkout, SonarQube code-quality analysis, OWASP Dependency-Check, Trivy security scanning, Docker image build, and Docker Hub deployment.
- Containerized a React-based Zomato-inspired web application using Docker and deployed it on Amazon EKS, using Kubernetes manifests, Helm, and kubectl for scalable application orchestration.
- Implemented GitOps and observability using Argo CD, Prometheus, Node Exporter, and Grafana to automate Kubernetes deployments and monitor application and infrastructure metrics.

Cloud-Native Monitoring Application on AWS EKS

- Developed a cloud-native monitoring application using Python Flask to display real-time CPU and memory utilization, providing better visibility into application performance.
- Containerized the application using Docker, stored the image in Amazon ECR, and deployed it on an Amazon EKS cluster using Kubernetes Deployments and Services.
- Leveraged Amazon EKS to build a scalable and production-like deployment environment, ensuring reliable application management and orchestration.

Certifications

Generative AI – Microsoft LinkedIn

AWS Solutions Architect Associate - Educative
